SUMMARY OF EXCAVATION AND BORROW

COMMON EXCAVATION FOR ESTIMATE

COMMON EXCAVATION	1,090	
EXISTING PAVEMENT REMOVED	34	
GRUBBING IN FILL	400	
TOTAL COMMON EXCAVATION		1,524

FILL FOR BORROW CALCULATIONS

COMMON FILL	960	
GRUBBING IN FILL	400	
TOTAL FILL		1,360

AVAILABLE COMMON EXCAVATION FOR BORROW CALCULATIONS

(1) TOTAL COMMON EXCAVATION		1,524
DEDUCTIONS:		
EXISTING PAVEMENT REMOVED	34	
GRUBBING IN FILL	400	
(2) TOTAL DEDUCTIONS:		434
TOTAL COMMON EXCAVATION (1) MINUS (2)		1,090
(3) AVAILABLE STRUCTURAL EARTH EXCAVATION		475
TOTAL AVAILABLE NON-ROCK EXCAVATION		1,565

COMPUTATION OF COMMON BORROW FOR ESTIMATE

TOTAL FILL	1,360
TOTAL AVAILABLE NON-ROCK EXCAV. 1,565 x 0.85 =	
TOTAL AVAILABLE EXCAVATION	1,330
TOTAL FILL MINUS TOTAL AVAILABLE EXCAVATION	30
TOTAL COMMON BORROW	30
WASTE	0

GENERAL NOTES

1. UNSUITABLE EXCAVATED MATERIAL SHALL BE REMOVED FROM THE SITE.
2. SEEDING AND LOAMING SHALL CONFORM TO SECTION 618 METHOD 2 AND SECTION 615 OF THE STANDARD SPECIFICATIONS, RESPECTIVELY AND SHALL BE APPLIED TO ALL SLOPES.
3. MULCH SHALL BE APPLIED IN AREAS SEEDED BY SEEDING METHOD NO. 2.
4. LOAM DEPTHS UNDER SEEDING METHOD NO. 2 ARE 4" AND ARE NOMINAL.
5. ALL NECESSARY PAVEMENT CUTTING SHALL BE SAWCUT AND DONE IN SUCH A MANNER AS TO LEAVE A CLEAN VERTICAL FACE.
6. WHERE HOT BITUMINOUS PAVEMENT GRADING "C" IS TO MEET EXISTING PAVEMENT A BUTT JOINT WILL BE REQUIRED - SEE PAVEMENT DETAILS.
7. PAYMENT FOR REMOVAL OF THE ENDS OF EXISTING PIPE TO BE EXTENDED, IF REQUIRED, SHALL BE CONSIDERED INCIDENTAL TO THE VARIOUS DRAINAGE ITEMS AND NO SEPARATE PAYMENT SHALL BE MADE THEREFORE.
8. REQUIRED EROSION AND SEDIMENTATION CONTROL SHOWN ON THE PLAN IS APPROXIMATE ONLY. ACTUAL TYPE AND LOCATION FOR HAY BALES AND SILT FENCE SHALL BE DETERMINED IN THE FIELD BY THE ENGINEER.
9. EXISTING UTILITIES ON THESE PLANS WERE COMPILED FROM FIELD SURVEY AND VARIOUS OTHER SOURCES. LOCATIONS ARE NOT GUARANTEED TO BE ACCURATE NOR IS IT GUARANTEED THAT ALL UTILITIES ARE SHOWN. NO SEPARATE OR ADDITIONAL COMPENSATION WILL BE ALLOWED THE CONTRACTOR DUE TO ANY VARIANCE BET DATA SHOWN ON THE PLANS AND ACTUAL FIELD CONDITIONS ENCOUNTERED.
10. WASTE MATERIALS SHALL BE DISPOSED OF OFF THE PROJECT SITE, IN ACCORDANCE WITH THE CHAPTER 404, DEPARTMENT OF ENVIRONMENTAL PROTECTION SOLID WASTE MANAGEMENT RULES.
11. REMOVING AND RESETTING EXISTING SIGNS WITHIN THE LIMITS OF THE PROPOSED TRAFFIC CROSSOVERS WILL NOT BE MEASURED FOR PAYMENT AND WILL BE CONSIDERED INCIDENTAL TO ITEM 652.361.

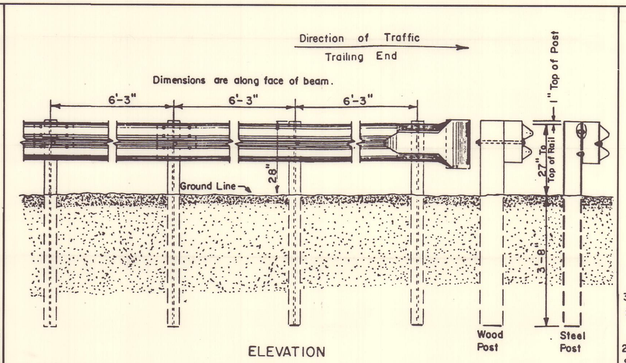
BREAKAWAY CABLE TERMINAL



1. Intermediate post spacing shall be 6'-3" unless otherwise shown.
2. Wood posts for Guard Rail shall be 6" Nom.(5 1/2" Min.)x 8" Nom (7 1/2" Min.) and offset blocks for type "3a" Guard Rail shall be 6"x 6".
3. Steel posts and offset brackets for Guard Rail shall be W6 x 8.5 or W6 x 9.0.
4. Steel posts punched with holes in addition to those specified, to accomodate other types of Guard Rail, will be accepted subject to the approval of the engineer.
5. "W" Beam Back up Plates shall be placed behind rail elements at intermediate steel posts (non splice posts).
6. Beam Type Guard Rail set on radius of 150' or less shall be Circular Guard Rail.
7. Offset Bracket shall be installed on all posts, except at B.C.T. and twisted end sections.
8. Guard Rail – Terminal End (RE-6) to be used only on off – traffic end of guard rail, on divided highway Washers F-12 shall be installed on the last 9 posts.
9. Identification letters and numbers on drawings refer to the standard detail drawings shown in "A Guide to Standardized Highway Barrier Rail Hardware" by AASHTO-AGC-ARTBA Joint Cooperative Committee.

MATERIALS

1. All steel, including the anchor bolts, shall be ASTM A572, Grade 50. For unpainted applications, ASTM A588 steel shall be used. ASTM A588 steel may also be used as an alternate for ASTM A572 steel.

2. Nuts for painted applications shall conform to ASTM A563, Heavy Hex, Grade A. Nuts for unpainted applications shall conform to ASTM A563, Heavy Hex, Grade C3 or DH3.

3. Charpy V-Notch tests are not required for steel used in bearing pedestals.

GENERAL NOTES

1. Bearings for use with painted structural steel shall be painted to conform to Section 504.36 of the Standard Specifications.

2. Upset threads on anchor bolts after assembly.

3. If there is a conflict between these Standard Details and the Design Drawings, the Design Drawings shall be followed.

GENERAL NOTES

1.) Splice connections shall be made with 7/8" Ø ASTM A325 high tensile strength bolts. Holes shall be 15/16" Ø.

2.) Web and flange filler plates shall be used as required when splicing beams of different sizes. Filler plates of 1/16" or less in thickness are not required.

3.) If beams of different sizes are to be spliced, use splice details shown for the smaller of the beams being spliced unless otherwise directed by design drawings.

4.) For material specifications and details not shown, refer to design drawings.

5.) If there is a conflict between this standard detail and the design drawings, the requirements of the design drawings shall be followed.

TENSION – FLANGE CONNECTION

FABRICATION NOTES

1.) All bolts shall be $\frac{7}{8}$" ϕ H.S. Bolts. Hole sizes for bolts shall conform to Section 504.23 of the Standard Specifications, and edge-distances shall be $1\frac{1}{2}$" min. unless otherwise shown.

2.) Connection plates and gusset plates shall have a minimum thickness of $\frac{3}{8}$" and shall have sufficient width to provide erection clearance. Connection plates shall have a minimum width of 7". For all stiffeners and bent connection plates, the plate thickness will be given on the design drawings.

3.) Depending on the skew-angle, stiffeners and connection plates shall be welded to the web plates with either fillet welds or a single bevel groove weld. Fillet welds shall be the minimum size specified by the AWS Structural Welding Code D1.1, table 2.7, unless otherwise shown on the design drawings. Fit-up shall meet the requirements of AWS D1.1, Art 3.3, Assembly.

4.) All stiffeners and connection plates shall extend to both the top and bottom flanges and shall be welded to the flanges with a fillet weld on both sides of the plate, except as indicated by note 5 and/or 6. Fillet weld size shall be as specified under note 3.

5.) Connection plates and stiffeners used as connection plates shall be connected to flanges in tension and stress reversal areas with the "Tension-Flange Connection" detail. All other stiffeners shall fit within $\frac{1}{16}$" (tight fit) at flanges in tension and stress reversal areas and shall not be welded.

6.) Bearing stiffeners through $\frac{3}{4}$ inch thick shall be connected to the bottom flange with a full penetration groove weld. Bearing stiffeners over 3/4 inch thick shall be connected to the bottom flange with a full penetration double bevel groove weld or shall be machined to have full bearing, at the option of the contractor.

7.) All fillet welds which connect stiffeners or connection plates to either a flange or web plate, shall be started and stopped approximately $\frac{1}{2}$ inch from the ends or edges of the plate.

8.) Bolt tension-flange connection plate to flange before welding stiffener or diaphragm connection plate to it.

9.) All dimensions shown as "__ ± 1" are variable in order to allow a series of crossframes to have the same slopes and/or dimensions.

10.) For unpainted applications all steel for diaphragms and crossframes shall be A.S.T.M.-A588. For bridges specified to be painted the steel for diaphragms and connection plates shall be A.S.T.M.-A36, except other steel classifications may be used subject to the approval of the Engineer.

11.) Use only those items called for on the design drawings. In case of conflict between these standard details and design drawings, the design drawings shall be followed.

NOTES

1. For locations of End Posts on the structure, see Design Drawings.
2. At times, an End Post Wing may be cantilevered for all or part of its length. For details, see Design Drawings.
3. If an End Post Wing is cantilevered, bars EP405 are to be omitted as needed.
4. When End Post Wing is cantilevered more than 2'-0", all #5 bars shall be replaced by #7 bars.
5. Nuts and washers for ⅞"ø anchor bolts shall be incidental to Guard Rail Pay Items. Nuts shall conform to A.S.T.M. A563, Grade DH, galvanized in accordance with A.S.T.M. A153, or Grade C3, plain.
6. Additional holes in the Modified Guard Rail Panel may be made by drilling, punching or any other method that produces a neat, clean hole of the required size. Burning of holes will not be allowed.
7. Spacer Tube shall conform to the requirements of A.S.T.M. A53, galvanized, Grade B Type E or S. Hex bolt and nut on spacer tube shall conform to A.S.T.M. A307. Payment for spacer tube, bolt and nut shall be incidental to the Guard Rail pay item.
8. Reinforcing Steel shall have 2" min. concrete cover.
9. After installation of Guard Rail is complete, upset the thread on the anchor bolts in three places around each bolt, at the junction of the nut and the exposed thread, with a center punch or similar tool.
10. Terminal Connector Anchorage shall be incidental to the applicable concrete pay item.
11. End Post shall be constructed normal to grade unless otherwise shown on Design Drawings.
12. All accessories (posts, bolts, nuts etc.) shall be as detailed for Standard Type 3 Guard Rail, except as otherwise detailed.
13. If there is a conflict between this Standard Detail and the Design Drawings, the requirements of the Design Drawings shall be followed.
2 14. Concrete shall be Class A with a silica fume additive

STANDARD DETAIL SHEETS

SHEET NO	TITLE
BD 101-89	BEARING PEDESTALS
BD 111-89	BEAM SPLICES: ROLLED BEAMS
BD 112-89	DIAPHRAGMS & CROSSFRAMES
BD 201-89	CONCRETE END POSTS
BD 401-89	ALUMINUM BRIDGE RAILING: 2 BAR
BD 501-89	SUBSTRUCTURE DETAILS

GENERAL NOTES

1. Reinforcing Steel To Have A Clear Cover Of 2", Unless Otherwise Specified.
2. Chamfer All Exposed Edges 1" Unless Otherwise Noted.
3. Plans of Existing Bridges Are Available At The Authority's Office At 430 Riverside St., Portland, Maine.
4. Shielding Required During Concrete Removal Shall Not Project Below The Bottom Flanges Of The Stringers. The Estimated Quantity Of Shielding Is The Minimum Required And Is Based On The Following Limits:
   a. Normal To ℄ Bridge: As Shown On Plans
   b. Parallel To ℄ Bridge: Abutment To Abutment
5. The Authority's Personnel Will Profile The Tops Of All Stringers Before The Form Work Is Started And Supply The Contractor With Final Bottom Of Slab Elevations.

SUPERSTRUCTURE NOTES

1. All Brush Curb, End Post And Top Pour Of Wingwall Concrete Shall Contain A Silica Fume Additive.
2. Longitudinal Reinforcement Shown In Deck Plan Is Symmetrical About ℄ Bridge.
3. Mortar For Bedding And For Joints In The Granite Curb Shall Contain A Non-shrink Additive.
4. The Superstructure Slab Concrete Shall Be Placed In One Continuous Operation And Shall Be Kept Plastic One Complete Span Behind The Span Being Placed.
5. If The Slab Placement Has To Be Terminated, The Termination Point Must Be At The Points Indicated In The Placement Details, Shown On The Superstructure Detail Sheet.
6. Adjust Reinforcing Steel To Fit Around The Scuppers In A Manner Approved By The Engineer. Do Not Cut Transverse Re-steel.
7. Depress 1"Ø Drains ⅜" Below Top Of Slab. Do Not Cover Drains With Membrane. Provide 23 Gauge Galvanized Screens (⅛" Mesh) Over Drains.
8. Seal Membrane At Deck Joints, Along Curb, And All Drains. Allow ¼" For Thickness.
9. Locate Scupper In Field To Discharge Into Drainage Trough. For Scupper Details, See Sheet 22.
10. Protective Coating For Concrete Surfaces Shall Be Used At The Following Areas: Top Of Concrete Curb, Fascia, Down To Drip Notch, And All Exposed Concrete Surfaces On The End Posts.

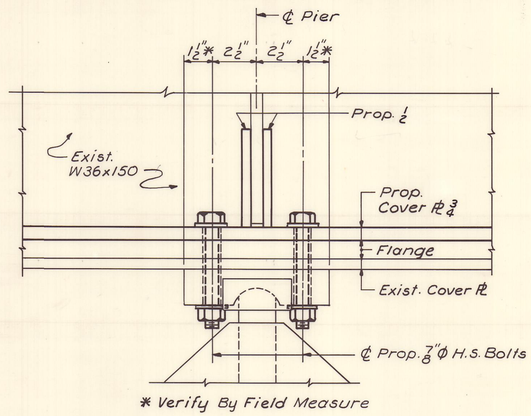
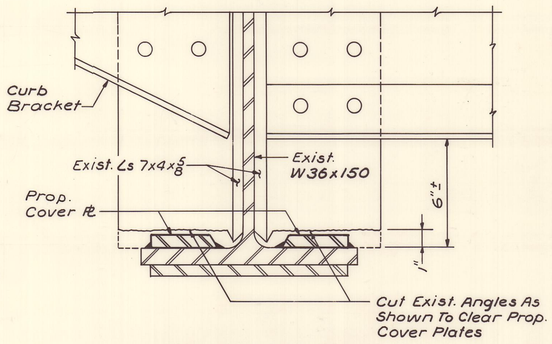
Note A
Provide ½" Plates As Shown On Each Side Of The Outstanding Leg Of All Bearing Stiffeners At The Piers. Grind To Fit L 7x4 Fillet Radius And Weld With ⅝" Fillet On Three Sides. Mill To Bear On ¾" PL At Bottom.

DETAIL AT PIER
3" = 1'-0"



* Verify By Field Measure

ELEVATION A-A
3" = 1'-0"



DETAIL AT DIAPHRAGM
AND CURB BRACKET
3" = 1'-0"

NOTES
1. All Proposed Plates To Conform To ASTM A709 Grade 36.
2. Proposed Cover Plates Shall Be Welded To Existing Beams After The Slab And Brackets Have Been Removed And Before The Forms Are In Place. The Contractors Attention Is Directed To The Need To Remove And Replace The Shielding.

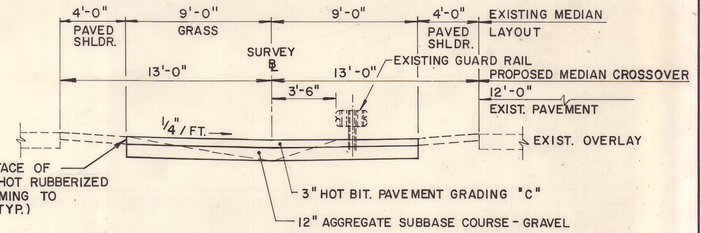
PHASE II DETOUR

NOT TO SCALE



TYPICAL SECTION - MEDIAN CROSSOVER

NOT TO SCALE

NOTES:

1. PHASE II WILL DETOUR SOUTHBOUND TRAFFIC ON TO THE COMPLETED NORTHBOUND BRIDGE DECK. THE NORTHBOUND AND SOUTHBOUND TRAFFIC WILL BE REDUCED TO ONE TRAVEL LANE IN EACH DIRECTION AS THEY SHARE THE NORTHBOUND BRIDGE DECK. THE PHASE II DETOUR LAYOUT SHALL BE REFLECTIVE OF THE PHASE I DETOUR LAYOUT. STATION LIMITS, TAPER LENGTHS, CURVE DATA AND THE STATION LOCATION OF TRAFFIC CONTROL DEVICES SHALL REFLECT THE PHASE I DETOUR.
2. THE CONTRACTOR SHALL NOTE THAT OTHER ADJACENT TURNPIKE BRIDGE PROJECTS MAY BE IN PROGRESS DURING CONSTRUCTION OF THE MAINE CENTRAL RAILROAD BRIDGE PROJECT. THE PLACEMENT OF SIGNS AND OTHER TRAFFIC CONTROL DEVICES WILL BE DEPENDENT ON THE ADJACENT BRIDGE PROJECTS. THE CONTRACTOR SHALL RESTRICT TRAFFIC TO ONE 12' LANE NORTHBOUND AND SOUTHBOUND WITH DRUMS @ 50' SPACING FROM STA. 2347+00 TO STA.2372+00 & STA.2382+00 TO STA. 2408+00. ALL PLACEMENT OF TRAFFIC CONTROL DEVICES AND COORDINATION WITH OTHER TURNPIKE BRIDGE PROJECTS SHALL BE APPROVED BY THE ENGINEER. ADDITIONAL DRUMS SHALL BE PAID FOR UNDER ITEM 652.33
